**CLEARING
AND MULCHING**

SITE™

CLEARING AND MULCHING

ENVIRONMENTALLY-SUSTAINABLE ACCESS SOLUTIONS.
CLEARING. SLASHING. LOGGING. MULCHING.

SITE is Canada's leading land clearing service provider.

It's a big statement, and we have the evidence to support it.

SITE operates the country's largest and most modern fleet of land clearing equipment and we pioneered the use of mulching as an environmentally-viable alternative to bulldozing and burning.

Our commitment to clearing and mulching work is to account for:

Climate. Clearing. Conservation.

Climate

At SITE, we take deep pride in our knowledge of Western Canada and the United States. No matter the climate or terrain, we have safe and reliable land clearing solutions to guarantee access and start your projects right.

Clearing

SITE has extensive experience clearing land for construction, and our complementary access solutions extend to all stages of your projects.

Our innovative methods of providing right-of-way incorporate environmentally sustainable processes. At SITE, we offer mulching as an alternative to clear seismic lines, roads and construction sites. This minimizes your requirement for reclamation work.

Conservation

Sustainable practices go beyond the method of clearing. SITE is also committed to conservation practices, integrating timber salvage, logging and hauling into our services. No tree is ever wasted.

Privately-owned fleet of access equipment

SITE has readily accessible equipment to deliver on any size project. All of our clearing and mulching equipment operates with global positioning technology to ensure accurate cuts.

Our privately-held fleet enables us to carry out projects efficiently and effectively from start to finish:

- Graders
- Mulchers
- Skidders
- Feller Bunchers
- Tractors
- Delimbers
- Excavators
- Snow Cats
- A full complement of specialized trucks and ATVs

As a fully-integrated energy services company, SITE is equipped to design, deliver and maintain a full spectrum of access solutions at any stage of a project for oil, gas, and resource development companies as well as communities and municipalities in many geographical areas of Canada and the United States. Our service offerings include a full spectrum of environmental, infrastructure and access solutions.
