ENVIRONMENTAL SERVICES

SITE™

ENVIRONMENTAL SERVICES

REMEDIATION. RECLAMATION. SEISMIC DRILLING. GEOTECHNICAL DRILLING.

SITE offers industry-leading environmental services through the lifecycle of your projects.

From evaluating potential project sites to cleaning up and restoring a disturbed landscape to its natural state, SITE has the knowledge, experience and required commitment to quality to solve your environmental challenges.

Remediation

SITE provides simple and effective remediation services to clean up contaminated sites. Our custom solutions ensure you expedite site cleanup, meet regulatory requirements and achieve site closure. We also offer offsite landfill services, including excavation, loading, manifesting, hauling, insurance, secure disposal and backfilling.

Reclamation

Our local and deep technical knowledge make SITE the natural choice to restore disturbed land to its natural state. We specialize in reclaiming lease sites, access roads, pipelines and post-construction sites. Our full-suite services include vegetation and erosion control, soil moving, soil replacement, soil tackifying, hydro seeding, mowing and gravel supply.

Seismic Drilling

Before drilling a single shot-hole, we acquire precise information about the terrain and then determine the best and safest drilling solution that will reduce environmental impact, save money and minimize downtime. We custom build our drills to accommodate all environments, and offer various options to access sensitive areas with minimum disturbance.

Geotechnical Drilling

SITE delivers detailed, accurate land chemistry information at the onset of your projects. Our services consist of drilling, removing and investigating bedrock, soil, groundwater and oil samples to ensure your project site is suitable for construction.

As a fully-integrated energy services company, SITE is equipped to design, deliver and maintain a full spectrum of access, infrastructure and environmental solutions at any stage of a project for oil, gas, and resource development companies as well as communities and municipalities in many geographical areas of Canada and the United States.
